Title: Software Developer
Department: Implementation
Location: Downtown Chicago Business District

PURPOSE OF JOB:

Join a rapidly growing healthcare software company providing real-time, clinical decision-support software to some of the most prestigious hospitals in the country. You will be involved in the entire implementation life cycle including planning, discovery, design, configuration and deployment, as well as project and client management responsibilities.

MAJOR DUTIES AND RESPONSIBILITIES:

- Manage all aspects of the implementation process which includes consultation with the client, requirements gathering and definition, solution design, configuration, unit and integration testing and deployment.
- Apply functional and technical expertise to execute the implementation plan.
- Collaborate with the project team and client team to ensure the successful delivery of the system.
- Develop SQL scripts (DDL and DML), C# code, ASP.net applications.
- Manage all aspects of select product enhancements from requirements gathering, solution design through development, testing and deployment.
- Provide technical support to ongoing client requests for system configuration refinement.

EDUCATION/EXPERIENCE REQUIREMENTS:

C#, SQL Server, T-SQL, XML

BONUS SKILLS:

HTML, Javascript, AJAX, JQuery, Interfaceware Iguana, Lua, HL7, ASP.NET, Web Services

OTHER QUALIFICATIONS:

- Minimum bachelor's degree in computer science or other relevant field of study. Candidates with appropriate work experience will also be considered.
- Minimum 3-5 year application development experience.
- Solid understanding of programming concepts such as structured code, object-oriented and multi-tiered development experience, design patterns, and N-Tier architecture.
- Experience with complex queries and creating stored procedures (SQL).
- Prior experience in healthcare or healthcare software a plus.
- Ability to work in a fast-paced environment with minimal guidance.
- Local to the Chicago area.
