

Software Developer

VigiLanz Corporation - Chicago, IL

Job Summary:

Develop and implement real-time, clinical decision-support software for some of the most prestigious hospitals in the country. This position involves the entire implementation life cycle including planning, discovery, design, configuration and deployment, and includes project and client management responsibilities.

Duties:

- Develop and maintain C# NET applications and SQL scripts;
- Manage all aspects of product enhancements from requirement gathering, solution design, through development, testing and deployment to ensure platform and interface comply with client requirements
- Manage implementation tasks including consultation with client, requirement gathering and definition, solution design, configuration, unit and integration testing and deployment;
- Manage HL7 interface integration and work with third party EMR/EHR health care systems; provide technical support to ongoing clients and system configuration maintenance.

Requirements:

- Bachelor's degree plus 5 years of experience or Master's degree plus 2 years of experience in software development
- Experience in software development must include 18 months in the following technologies and tools: C#, Visual Studio, SQL Server, T- SQL, SQL Server Management Studio
- Must be familiar with object-oriented programming and relational databases
- Additionally, experience in HL7, Lua, Azure Dev Ops, and Regular Expressions is a plus

Field of study: Computer science, IT, Biotechnology, or related field

Job Type: Full-time
